

I wish to express my concerns about another pending price increase to electricity supply . This industry seems to have had the freedom to gouge consumers where increases electricity prices have exceeded 80% since 2006. I know of no other industry where increases like these are being allowed to go unchecked. Like many concerned consumers , I am actively seeking alternatives. If this is the intrusion - the policy is working. No indexed increases are greatly effecting my ability to stay in business.
