

Rural irrigation price review 2020–24, draft Mareeba–Dimbulah water supply scheme and distribution system

Why are we recommending irrigation prices?

The Queensland Government directed us to recommend irrigation prices for Sunwater and Seqwater customers over the pricing period 1 July 2020 to 30 June 2024.

This includes recommending prices for irrigation customers in the Mareeba–Dimbulah water supply scheme (WSS) and distribution system, which is located near the town of Mareeba.

Issues related to the prices for non-irrigation customers are outside the scope of our review.

How we have recommended prices

In recommending prices we have not included a return on, or depreciation of, investments made prior to 1 July 2000.

We have recommended two-part tariffs for the tariff groups in this system. The first part is a *fixed price* per megalitre (ML) of water access entitlement (WAE), and the second part is a *volumetric price* per ML of water used. We have also recommended to maintain the access charge, and increase it annually by our estimate of inflation (2.37 per cent).

The volumetric prices (Part B and Part D) recover variable costs (e.g. a portion of labour costs and electricity costs relating to pumping) that change with water usage. The remaining costs associated with this system are recovered by the fixed prices (Part A and Part C). We have assessed all expenditure to ensure that Sunwater only recovers prudent and efficient costs.

It is government policy that, over time, irrigation prices should transition to fully recover prudent and efficient costs of operating, maintaining, administering and renewing each scheme. Cost recovery for Sunwater’s irrigation customers will improve from 91 per cent in 2020–21 to 94 per cent by 2023–24. The shortfall is currently funded by a subsidy, paid by the Queensland taxpayer, which will reduce over time as prices transition to cost reflective.

The total fixed price increases by up to \$2.38/ML (\$2020–21) plus inflation. The total volumetric price increases by our estimate of inflation (2.37 per cent) from 2020–21 onwards.

What prices have we recommended?

After extensive consultation with irrigators, we have released our draft report.

For river-only customers in the Mareeba–Dimbulah WSS, our draft prices fully recover costs.

For the Mareeba–Dimbulah distribution system, all draft prices will cover costs by the end of the pricing period, except for the Channel–Relift tariff group. Cost recovery for the

Channel–Relift tariff group will increase from 89 per cent in 2020–21 to 96 per cent by 2023–24.

Our draft recommendations for the access charge result in it increasing annually by inflation over the pricing period.

Draft recommended prices for irrigation customers—\$/ML

Tariff group	2019–20 (Current)	2020–21	2021–22	2022–23	2023–24
Mareeba–Dimbulah WSS					
Fixed (Part A)	15.87	15.87	15.87	15.87	15.87

Total Volumetric	86.81	86.51	88.56	90.66	92.81

How we have addressed stakeholder concerns

Dam safety

Some irrigation stakeholders have raised concerns about the allocation of dam safety expenditure to irrigators.

Dams in Queensland have generally been built for the primary purpose of supplying water to users. As a compliance cost, we consider that dam safety upgrade expenditure should be treated as a normal cost of operation in supplying water services to customers.

We have reflected the informal flood moderation benefits of dams by only allocating 80 per cent of irrigators' share of dam safety upgrade expenditure to the allowable cost base.

Where a dam has a formal flood mitigation role, we consider that the costs of dam safety upgrades should be shared with beneficiaries in the broader community.

See Part A (Chapter 4) for further details.

Operating costs

Some irrigation stakeholders in this scheme have raised concerns with costs incurred to implement the 2015 recommendations made by the Inspector-General Emergency Management (IGEM costs), electricity costs and insurance costs.

We propose to accept Sunwater's revised (lower) IGEM costs provided to us in its June 2019 regulatory model. However, we have proposed allocating this between irrigation and non-irrigation customers using the headworks utilisation factor. See Part B (sections 2.9 and 7.3) of the draft report for further details.

Sunwater submitted revised electricity costs in June 2019. We propose to accept the revised electricity costs for bulk schemes as they are not materially different from our alternative estimates. However, we have reduced electricity costs for distribution systems. See Part B (section 2.5) of the draft report for further details.

We propose to accept Sunwater's revised (higher) insurance costs as they are driven by recent changes in insurance market rates. We have also proposed allocating this between irrigation and non-irrigation customers using the headworks utilisation factor. See Part B (section 2.6) of the draft report for further details.

Some irrigation stakeholders were also concerned with Sunwater's cost allocation methodology used to allocate non-direct costs. We have reviewed the cost allocation methodology and consider it appropriate. Non-direct costs are allocated based on the share of direct labour in a scheme because these costs mainly relate to staff time on head office and local support functions.

However, we have reduced the size of overheads to be allocated as Sunwater's proposed corporate overhead costs were significantly higher than its historical expenditure.

See Part B (section 2.8) of the draft report for further details.

Renewals annuity

Some irrigation stakeholders raised concerns about Sunwater's asset management practices and the prudence and efficiency of meter replacement costs.

We have identified improvements to Sunwater's asset planning and management to ensure assets are not replaced earlier or later than required. See Part B (section 3.2) for further details.

We have reduced Sunwater's forecast renewals expenditure by 29.5 per cent (relative to the November 2018 submission) to reflect our assessment of the prudent and efficient level of expenditure. See Part B (sections 3.4 and 3.5) for further details.

Recreation costs

Some irrigation stakeholders raised concerns over the recovery of renewals expenditure relating to recreation services from irrigators.

We have reviewed Sunwater's forecast renewals expenditure to ensure that expenditure relating to recreational services have been excluded. See Part B (section 3.4) for further details.

Distribution losses

Some irrigation stakeholders were concerned about the level of distribution loss WAE allocated to irrigators.

We have estimated the costs associated with historical excess distribution loss WAEs, and allocated the bulk holding (fixed) costs of these to Sunwater on the basis that distribution system customers should not pay for distribution loss WAEs in excess of what is required to meet actual loss releases,

See Part B (section 6.3) for further details.

Tariff structure

Some irrigation stakeholders were concerned about the future of the declining block tariff.

We note that the differential is widely supported through the Mareeba-Dimbulah distribution system and has been in place for an extended period of operation. In the absence of updated information on Sunwater's cost of supply to the three different customer groups, we have proposed to maintain existing arrangements.

Given the relatively smaller differential between the small (less than 100 ML WAE) and medium (100–500 ML WAE) tariff blocks, there may be opportunities to simplify this into a two (rather than three) tariff blocks in the future.

Access charge

Concerns were also raised by some irrigation stakeholders over what costs the access charge includes, and price increases above inflation for the access charge.

We have recommended the access charge increase by inflation over the pricing period. Sunwater have submitted a supplementary submission on the possibility of an access charge for all service contract areas. We have released an issues paper regarding this proposal and are currently seeking stakeholder submissions.

Other matters raised by stakeholders

Some irrigation stakeholders in this scheme have raised concerns about price levels and the impact of higher water prices on their businesses, regional economies and local communities.

In recommending prices, we have emphasised the pricing principles set out in the referral, as these principles give

effect to the Government's water pricing policy. One of the key principles of that policy is that prices should increase gradually until they reach a cost-reflective level, where they recover the irrigation share of the scheme's operating, maintenance and capital renewal costs but do not recover a return on, or of, the scheme's initial asset base (as at 1 July 2000).

The Government has previously indicated that in setting the lower bound cost target for irrigation water prices and establishing a gradual transition path to this level, it has considered a range of matters, including customers' capacity to pay and the historical regional development driver for many of the schemes.

See Part A (Chapter 2) for further details.

We have recommended a reduction in scheme costs for Mareeba–Dimbulah WSS and distribution system

In our draft report, we have adjusted Sunwater's proposed bulk scheme costs by 4 per cent over the pricing period 1 July 2020 to 30 June 2024.

Total scheme costs over the price path period—Mareeba–Dimbulah WSS (2018–19 dollars) (\$'000)

Figure notes: 1. Revenue offsets are not included in the charts. 2. QCA Non-direct operating costs includes the QCA regulatory fees.

In our draft report, we have decreased Sunwater's proposed distribution scheme costs by 20 per cent over the pricing period 1 July 2020 to 30 June 2024.

Total scheme costs over the price path period—Mareeba–Dimbulah distribution system (2018–19 dollars) (\$'000)

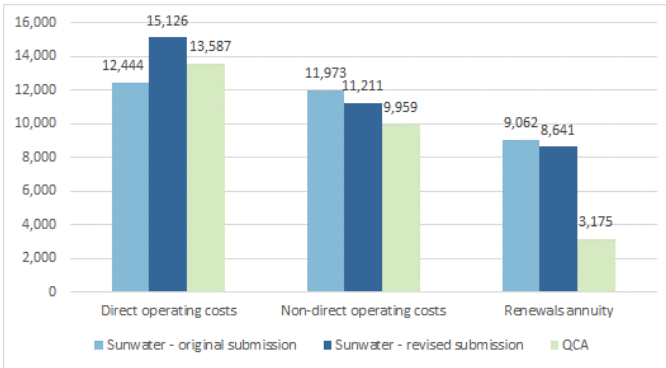

Figure notes: 1. Revenue offsets are not included in the charts. 2. QCA Non-direct operating costs includes the QCA regulatory fees.

Further details on our recommended costs for Sunwater schemes are in Part B (chapters 2 to 4) of the draft report.

We have assessed local impacts

In recommending prices, we have considered bill impacts for irrigation customers.

The table below presents an estimate of the change in water bills (compared to the bill based on current prices), for various levels of water use.

Further details on bill impacts are in Part B (chapter 9, appendix C and chapter 7) of the draft report

Change in water bill

Water use as portion of entitlement held (%)	Water bill change from 2019–20 to 2020–21 (%)	Water bill change from 2019–20 to 2023–24 (%)
Mareeba–Dimbulah WSS		
0	-	-
25	0.0	0.1
50	0.0	0.2
75	0.1	0.3
100	0.1	0.4
Outside a relift up to 100 ML		
0	1.8	9.9
25	0.7	8.7

How you can get involved

Public involvement is a key part of our review. Our draft report provides stakeholders with an opportunity to review and comment on our proposed approach and prices, prior to us finalising our report and providing it to the Government by 31 January 2020.

We now invite stakeholders to comment on this draft report (submissions are due by 4 November 2019) and to attend the workshops we will be running in regional Queensland in September/October 2019.

We also invite stakeholders to consider and provide comment on late submissions provided by Sunwater on a minimum access charge and an electricity cost pass through mechanism.

An indicative timetable for the remainder of our review is provided in the table below.

Timetable

Task	Date
Stakeholder workshops on draft report	September–October 2019
Submissions on draft report due	4 November 2019
Final report provided to the Government	By 31 January 2020
Final report published	Early February 2020

Where you can find out more
